3D Scanning and 3D Printing Studio

Scanning and 3D Printing Studio was created under the 3D Objects Materialization Laboratory within a building as a part of the project "Technology Park MMC Brainville. Operational Programme Innovative Economy Measure 5.3."

The Studio equipment allows for comprehensive work tide with materialization of 3D objects, scanning of real objects or - by combining these two functions - to copy existing elements.

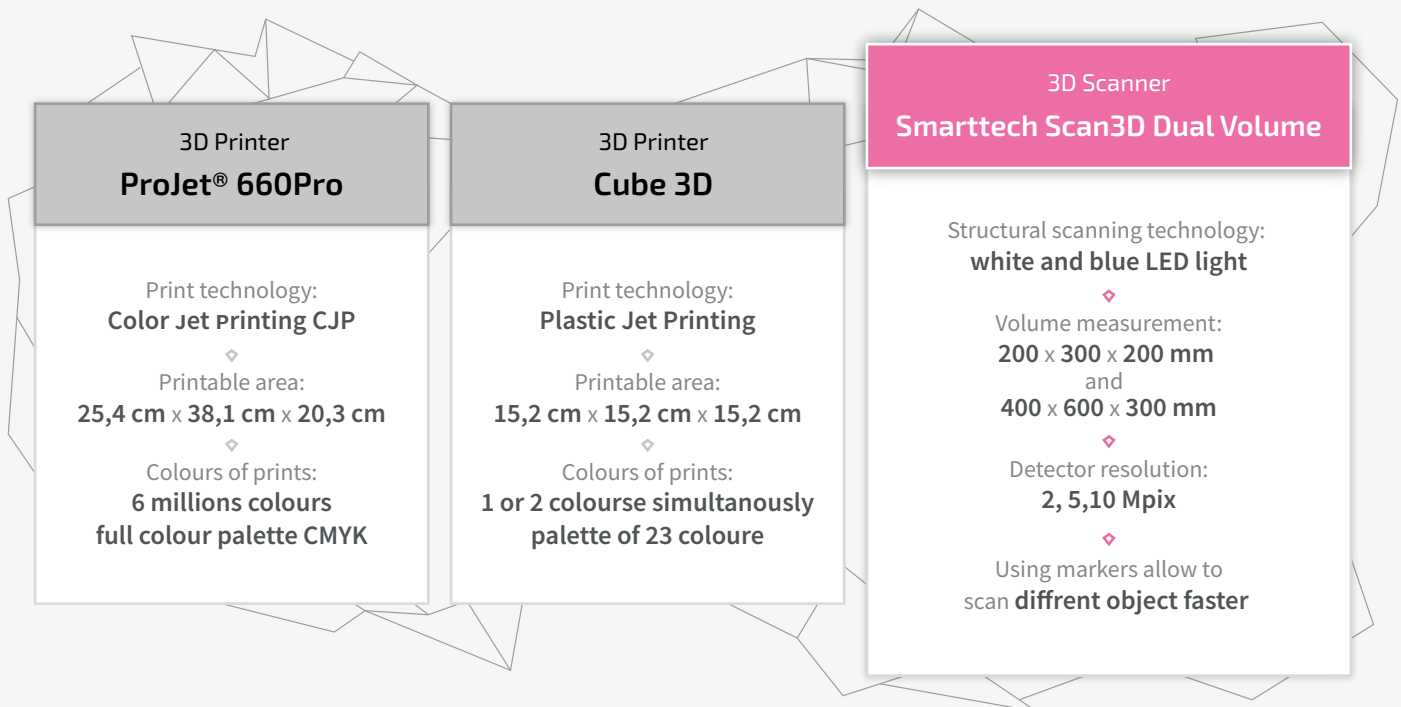

The usage of 3D Printers

Specialized equipment allows to create elements, which can be parts of toys, electric products or industrial machines. It is a perfect solutions if necessary to create a prototype or to product limited edition items. In addition, spatial printing finds its application in architecture (models, mock-up), medicine (medical models) and handicraft (jewelry, decorations).

The usage of 3D Scanner

The 3D scanner allows to project each type of objects, with different size and complication level. With the metrological precision, the scanner can be used as a measuring device for reverse engineering and quality control. It is also helpful in the modeling process of objects in computer graphics programs. 3D scanner is also used in such fields as medicine, geodesy, museums, or archeology.

Equipment:

Technical specification of equipment: www.brainville.pl/laboratoria

Scanning and 3D Printing Studio is complemented by the 2D and 3D Graphic Studio, where it is possible to model and materialize any shape.

Renderfarm	MMC brainville	Sound Studio	MMC brainville

Price offer

The main idea of assessment of services at Technology Park MMC Brainville is to create offers similar to the market average. Furthermore, for micro, small, and medium-sized companies those offers will be lower than the market average.

An important aspect of the offer is the possibility to grant de minimis assistance, in accordance with the Regulation of the Minister of Regional Development of 30 January 2009 on granting by the Polish Enterprise Agency financial assistance to support innovation centres as a part of the Operational Programme Innovative Economy 2007-2013 .

The offer is created after a conversation with contrahent, and is based on individual contrahent's needs.
